

EndUser Training Infosheet

Welcome to the SANS EndUser Training Content Series

Change User Behavior. Mature Your Program. Protect Your Organization.

Grow your program and achieve your desired program maturity outcome. Equipped with a variety of brand-new Training Content Styles and fresh updates to our existing computer-based training styles, we elicit engagement of every learner, regardless of their comprehension level.

Craft a custom mix of training to cover the relevant awareness topics that can be hosted on nearly any platform and has been translated into over 33 different languages. Training addresses relevant threats and teaches security concepts that are critical to your workplace, while adhering to the ideologies and needs of your organization's corporate culture.

Traditional Animation – This straightforward training in a motion-graphic style works to ensure the learner understand the material and can build upon comprehension.

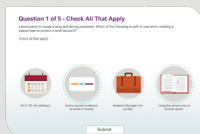

Host-Led Animation – A live action host and motion graphics are visually combined to capture the learner's attention in this highly engaging multi-sensory series.

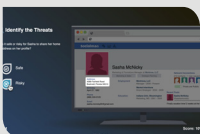

Live Action – In this Training Style, live actors overcome real-world cybersecurity challenges in these fun-to-watch Hollywood-style mini movies.

Expert Introduction – Cyber security subject matter expert, Lance Spitzner introduces each topic to provide a human element to animated stories that help learners put their security awareness skills into action.

Situational Interactive – Full animated training modules plus situational quiz situations presented at the end of each module. Learners are presented with a variety of a realistic scenarios, requiring them to select the correct action.

Applied Interactive – Engrosses players in hands-on challenges, requiring them to defeat security threats and display a deeper understanding of security behaviors in order to succeed.

Gamified Interactive – These interactive, hands-on games focus on in-depth knowledge and application of proper security behaviors across multiple topics while providing additional engagement using point, progression, and leveling.

Trust Matters. Experts Matter.

Our world-renowned cybersecurity instructors and experts develop and drive the core messaging and training concepts, ensuring you have the best available training to protect your organization. They've leveraged advanced learning techniques to help keep learners engaged from start to finish and build upon their knowledge, ensuring a greater adoption of varied learning levels.

Get to know our SANS Trinity of world-leading experts:

Cyber Security Subject Matter Experts

These world-leading authorities have identified the most critical threats and developed a quality curriculum to teach an end user the appropriate behaviors to take when faced with security risks.

Learning Experience Design Experts

Designers, curriculum-builders, and adult-learning specialists who've made the training readily digestible, improving learner engagement and memory retention. Their teaching methodologies ensure awareness behaviors are taught so organizations can achieve their awareness goals.

Client Success and Program Customization Experts

A global team dedicated to planning, deploying, and managing the growth of awareness programs. These program specialists help organizations of any size to determine their program maturity and work to execute their program's vision.

No other organization boasts a similar depth or range of cybersecurity expertise.

Learner Engagement is Key

Launch your training program beyond computer-based training and land higher among the maturity curve through our vast library of Engagement Toolkits.

Our broad suite of supplemental materials works continually engage learners throughout your organization. New engagement Toolkit materials are released on a monthly basis and cover important concepts like malware or phishing.

You're the first defense in protecting your organization. Take the first step and schedule your demonstration on how you can train your learners to adopt great security awareness behaviors through the best end user training available.
